

FOR IMMEDIATE RELEASE

## FLX Back-to-Back Services Bench

Austin, TX – June, 2024 – Back-to-Back Services Bench is a groundbreaking addition to lab environments designed to meet the evolving needs of modern laboratories. Featuring a component-welded steel frame and a knock-down design, the FLX Bench is flat-packed for simplified shipping and can be assembled with ease, requiring only six bolts.

The FLX Back-to-Back Services Bench addresses common lab challenges with its versatile and user-friendly design. Adjustable shelves offer customizable storage solutions, while integrated wire management troughs conceal electrical cords and services, maintaining a clean and organized aesthetic. This bench seamlessly integrates with overhead service panels and allows for flexible service line routing both above and below the bench, ensuring a clutter-free workspace.

The FLX Bench offers unmatched adaptability. Single-sided units can be effortlessly converted to double-sided configurations with a convenient add-on kit, providing labs with even more flexibility in their layout. This modular approach minimizes freight and installation costs while maximizing space utilization and lab efficiency.

Connecting two FLX units, as seen at NeoCon, is a specially designed, height-adjustable table that functions flawlessly as a microscope table. The ergonomic curved form allows for comfortable use of the microscope in both seated and standing positions, ensuring optimal ergonomics and user comfort.

The FLX Bench's universal single-configuration parts ensure ease of use and installation. Back-to-back configurations require just a work surface and a support frame with legs, simplifying the setup process and allowing labs to repurpose and reconfigure their layout quickly and effortlessly.

The FLX Back-to-Back Services Bench is a testament to Formaspace's commitment to innovative design and functionality, providing labs with the flexibility and efficiency they need to adapt to changing demands.
