

FOR IMMEDIATE RELEASE

RGX – Modular Casework

Austin, TX – June, 2024 – The RGX system aims to set a new standard for casework in laboratory, office and hospitality environments by offering unmatched flexibility, adaptability, and innovative design to meet the specific needs of these diverse settings. Integrating seamlessly with existing furniture to create a cohesive aesthetic, the RGX system features an easy bolt-together design for a faster and more efficient installation process, reducing setup times from days to hours. It offers various work surface and front application options, including steel, phenolic, and HPL/LPL, to match diverse workplace designs while supporting plumbing and electrical needs similar to traditional fixed casework.

The RGX system provides a unique and innovative approach to casework, exceeding industry standards for flexibility and adaptability. It is SEFA compliant and working towards full certification, ensuring it meets the stringent requirements of demanding laboratory applications. RGX construction is also designed to meet the rigorous demands of laboratories. Easy-to-clean surfaces and durable build ensure the system maintains high standards for cleanliness and functionality, making it suitable for various lab applications, including blood labs, titration labs, food testing labs, clean rooms, tech labs, and educational facilities.

The RGX Hospitality pieces shown at NeoCon, including a credenza and a lounge station, demonstrate the system's functional and aesthetic adaptability. The Lounge Station features Wilsonart's Traceless phenolic in Nile Velvet, providing a comfortable and stylish seating area with an integrated trash receptacle for a clean and functional environment. The Bar Station, with its pull-out element and Wilsonart phenolic worksurface, ensures durability and adds warmth and character to the space. Offering the same level of flexibility and customization as its lab counterparts, the RGX Hospitality Collection allows users to design spaces that reflect their unique needs, using a variety of Wilsonart phenolic materials for countertops and fronts.

Designed to adapt to evolving needs, the RGX system enables users to modify or expand their layout with minimal disruption, saving both time and money. Its modular design and bolt-together construction facilitate a quick and efficient installation process, reducing downtime, and ensuring that the system meets the high standards required for both laboratory and hospitality environments.
